Marketing Strategy

PG Geotechnical Consultants
Sept 18, 2026

Agenda & Purpose

Purpose:

- ✔ The full marketing strategy for PGGC.

Agenda:

- ✔ Review recommendations on marketing
- ✔ Explain the full year of recommended marketing activity
- ✔ Discuss further work together

From Audit to Growth: A Proven 3-Phase Process

NEW INITIATIVES MARKETING

Executive Summary

We recommend:

- ✔ Following the marketing strategy for a successful launch into Ontario

To do this:

- ✔ Implement the recommended marketing tactics
- ✔ Commit to business development daily
- ✔ Review metrics to adjust and capitalize on opportunities in person and online

Client Insights

NEW INITIATIVES MARKETING

Client Insights - Positive Feedback

Across the interviews, the most consistent strengths were

- ✔ Specialist capability for complex and unusual geotechnical problems.
- ✔ Direct senior involvement and clear technical accountability.
- ✔ Strong reliability, responsiveness and follow-through.
- ✔ Sophisticated technical analysis grounded in practical engineering.
- ✔ Continuity from investigation through design and implementation.
- ✔ Proactive attention to technical, project and contract risk.
- ✔ A small, accessible team that clients can reach directly.

The most important underlying benefit is confidence: interviewees trusted PGGC to understand difficult conditions, make sound technical decisions and remain engaged until those decisions could be applied to the project.

Insights:

- ✔ Expert
- ✔ Better experience than with other, similar firms
- ✔ Ownership to delivery of work

Client Insights - Constructive Feedback

The feedback points to five practical areas for improvement:

- ✔ Make technical reports easier to interpret through stronger annexes, visuals and dimensioned explanations.
- ✔ Match the complexity and cost of the solution to the actual scale and risk of the problem. Some solutions may need to be simplified for smaller projects.
- ✔ Provide quicker, more commercially useful direction in early client conversations.
- ✔ Reduce unnecessary length in routine communications.
- ✔ Manage delivery expectations and capacity more deliberately.
- ✔ Promote your company in Canada

Insights:

- ✔ Reporting more visual
- ✔ Promote Canadian Co.
- ✔ Match solution to problem

NEW INITIATIVES MARKETING

Competitor Review

NEW INITIATIVES MARKETING

Competitors: What's The Landscape Look Like?

Segmentation	What Clients Are Buying	Opportunity
Direct specialist / boutique comparators	Senior technical judgment for complex ground, geo-structural and underground problems; advanced design, modelling, constructability and specialist review	This is where PGGC should be focussed currently
Partial competitors / Regional specialist / full-service geotechnical firms	Strong Ontario geotechnical and hydrogeological capability with substantial field, investigation, monitoring, materials testing and construction-support resources.	Represents future potential as, and if, PGGC decides to grow capabilities/services within this market
Large multidisciplinary market actor / potential partner	Integrated national engineering, environmental, materials, inspection and project-delivery capability	Represents partnerships, not competitors

Insights:

- ✔ Many industry players
- ✔ Significant expertise required
- ✔ Extreme specialization
- ✔ Segmentation rooted in specialization vs. geography or scale

Competitors: Who Are They Specifically?

- Primary competitors, as aligned with PGGC, are:
  - Isherwood Geostructural Engineers, and
  - Grounded Engineering

- Secondary competitors, specifically related to tunnel and under/above-ground, are:
  - Dr. Sauer & Partners, and
  - Gall Zeidler Consultants

Insights:

- ✔ Based on specialization
- ✔ Primary act as the competitive reference and benchmarking
- ✔ Secondary are worth keeping an eye on, but pose less competitive risk or comparison
- ✔ Focus will drive efficiency and clarity in strategic planning – it's a guide, not a rule

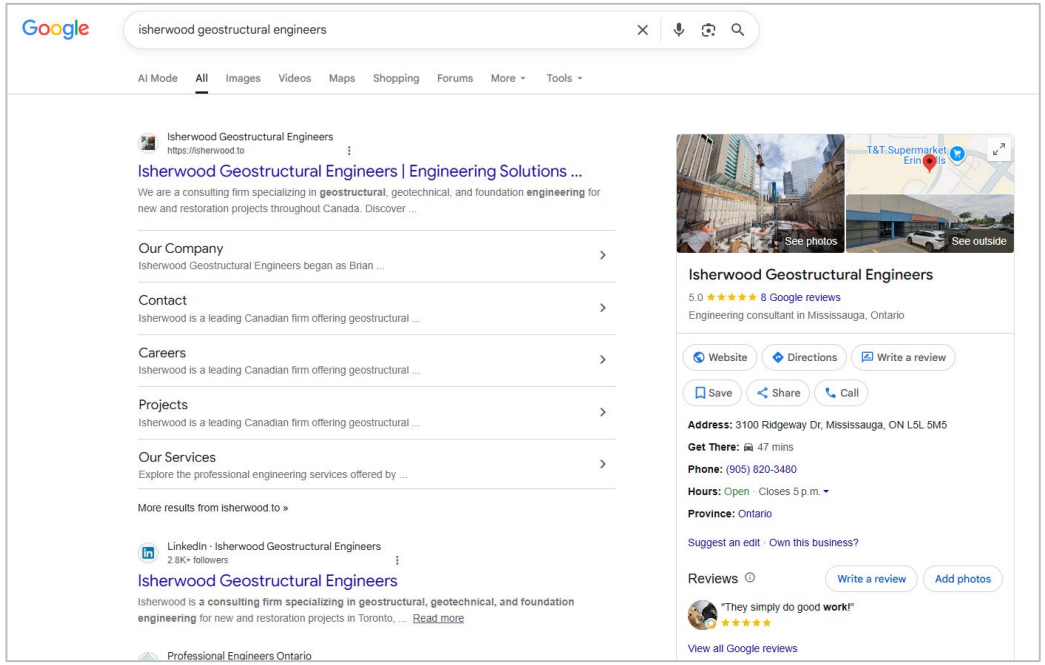

Competitors: Isherwood Geostructural Engineers

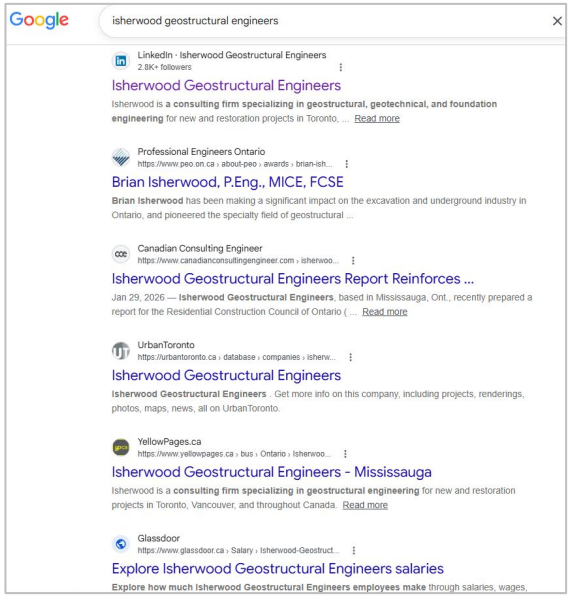

- **Isherwood Positioning:**
  Isherwood specializes in geostructural engineering for new and restoration projects in Toronto, Vancouver, and throughout Canada. We provide superior value to our clients, rooted in a heavy focus on personalized service, constructability, and high quality field review (source: Isherwood GBP).
- **Founded:** 1972
  Location: Mississauga, Ontario; Burnaby, BC; wider Canadian/international work
  Website: https://isherwood.to
- **What They Do:** Services include excavation support, retaining structures, underpinning, foundations, finite-element analysis, ground improvement, tunnels and shafts.
- **Competitive strengths:** Exceptional GTA track record; highly recognizable geostructural/shoring brand; deep experience with contractors and constructability; long operating history; practical design reputation.
- **Potential limitation relative to PGGC:** Isherwood's public identity is particularly concentrated around geostructural, excavation-support and foundation engineering.
- **PGGC opportunity:** PGGC should differentiate around cases where **ground + groundwater + structure + underground construction methodology all interact** and require integrated senior judgment.

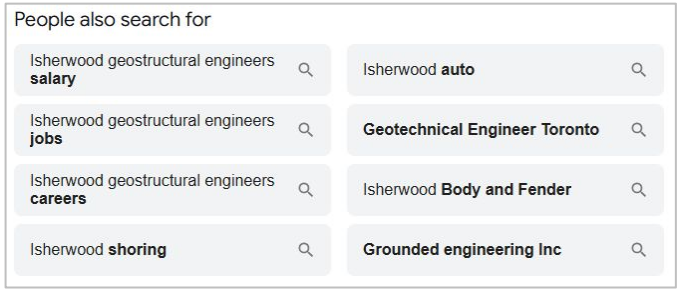

Insights:

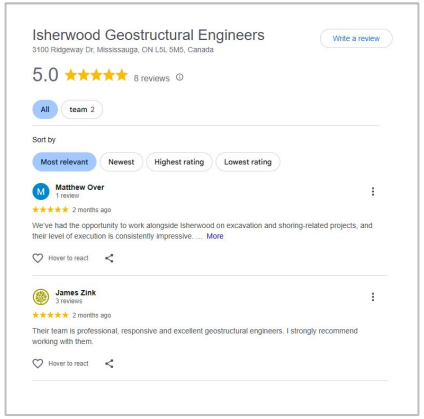

- ✔ Most formidable and comparable competitor
- ✔ PGGC could differentiate by owning the intersection of underground engineering, hydrogeology, geotechnical behaviour and structural response

Competitors: Isherwood Search/ GBP

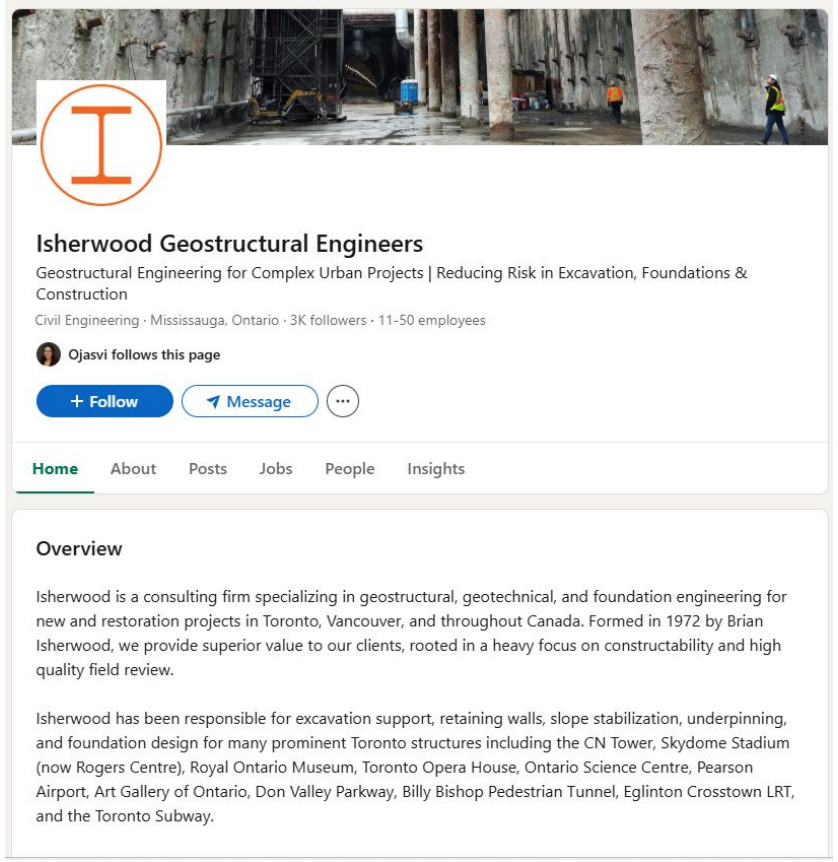

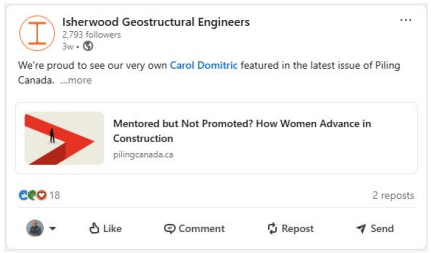

Insights:

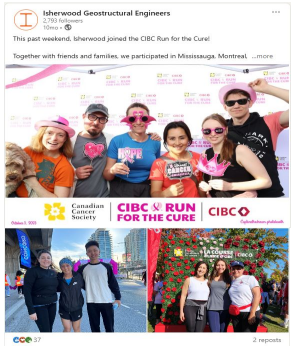

- ✔ GBP Photos (4 by owner + 3 additional)
- ✔ 8 Reviews – all 5 star (latest 2 mos)
- ✔ Reviews – but no responses
- ✔ Backlinks/ search listings

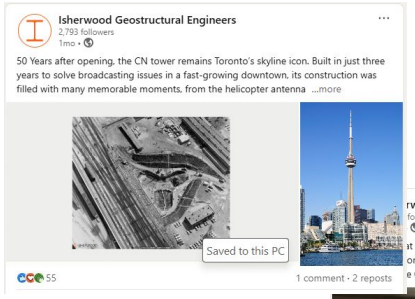

NEW INITIATIVES MARKETING

Competitors: Isherwood Social

"Our most memorable jobs have been those which posed the most exciting challenges: unusual site conditions or geometries, hard-to-excavate soils, tight spaces, or unknown variables emerging during excavation. Each of these challenges is a new learning experience, helping us improve and continue to develop innovative, cost-effective, and client-oriented solutions."

Insights:

- ✔ Strong local presence/ projects
- ✔ Over 50 people, including 12 engineers and 6 EITs
- ✔ Thoughtfully written content
- ✔ Activity on LinkedIn & YouTube
- ✔ Infrequent posting; 2-3 weeks
- ✔ Good variety: employee profile, events, culture, projects…
- ✔ 2,793 followers, low engagement: 0.5-2% likes, 0-1 comment, and 2-3 shares

NEW INITIATIVES MARKETING

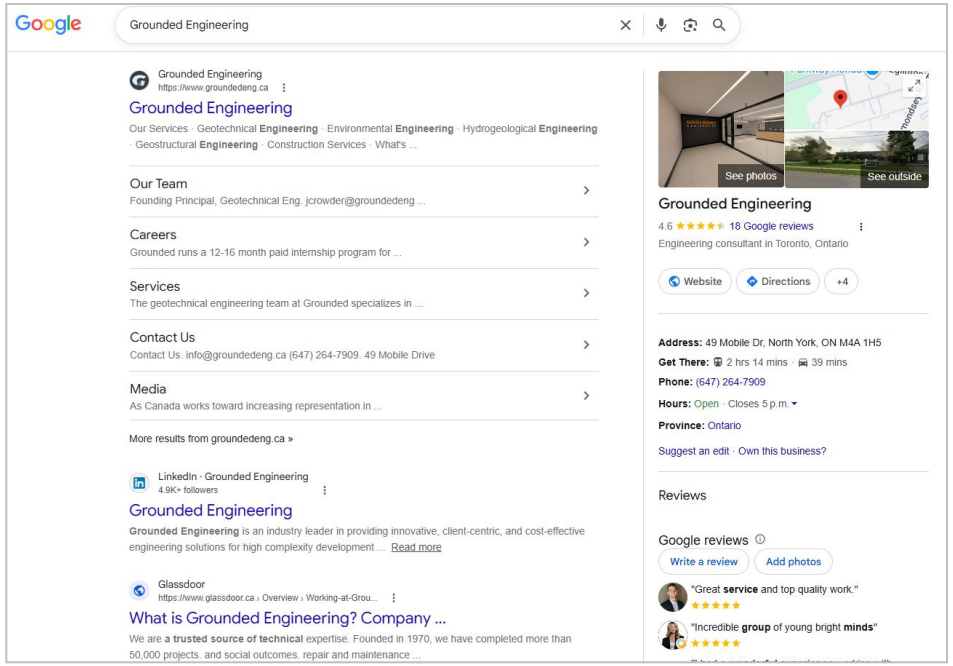

Competitors: Grounded Engineering

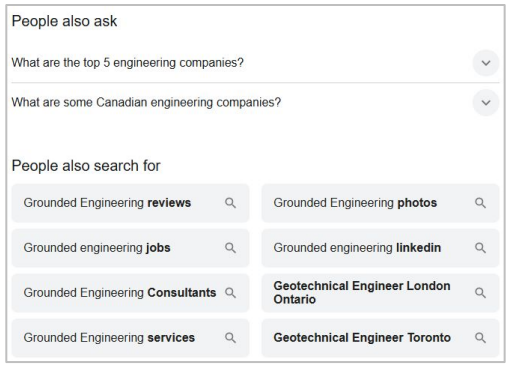

- **Grounded Positioning:**
  A modern Toronto ground-engineering specialist integrating geotechnical, hydrogeological, geostructural and construction expertise for complex urban development and infrastructure (source: Grounded GBP).
- **Founded:** 2019
  Location: Toronto; work across Canada
  Website: https://www.groundedeng.ca
- **What They Do:** Services include geotechnical, hydrogeological, geostructural and construction engineering; finite-element groundwater modelling; support-of-excavation systems; tunnel shafts; underpinning; deep foundations; peer review; and instrumentation/monitoring for TTC and Metrolinx environments.
- **Competitive strengths:** Very modern specialist brand; employee ownership; integrated below-grade services; sophisticated hydrogeological/geostructural offering; strong construction-phase capability; credible transit-market language.
- **Potential limitation relative to PGGC:** Its offering extends farther into environmental and broad field/construction services.
- **PGGC opportunity:** Major-infrastructure experience, advanced analysis, independent technical review, unusual underground problems and assignments where senior-level specialist input is the actual product.

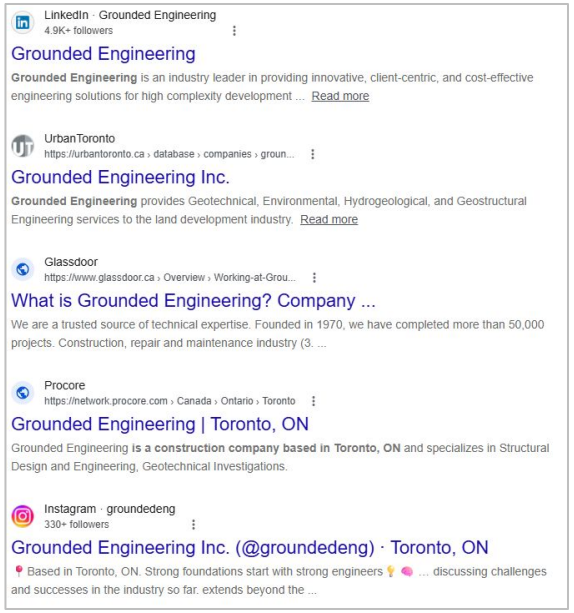

Insights:

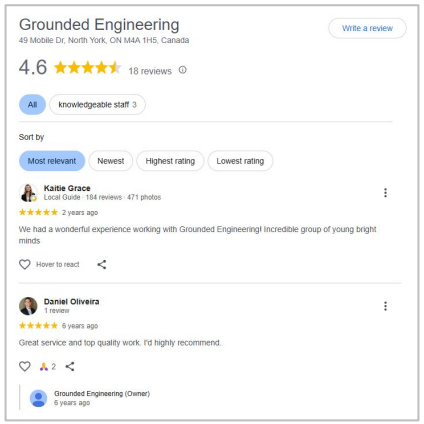

- ✔ Modern and youthful approach
- ✔ PGGC could differentiate by making advanced specialist analysis and senior advisory an even more concentrated part of its identity

Competitors: Grounded Search/ GBP

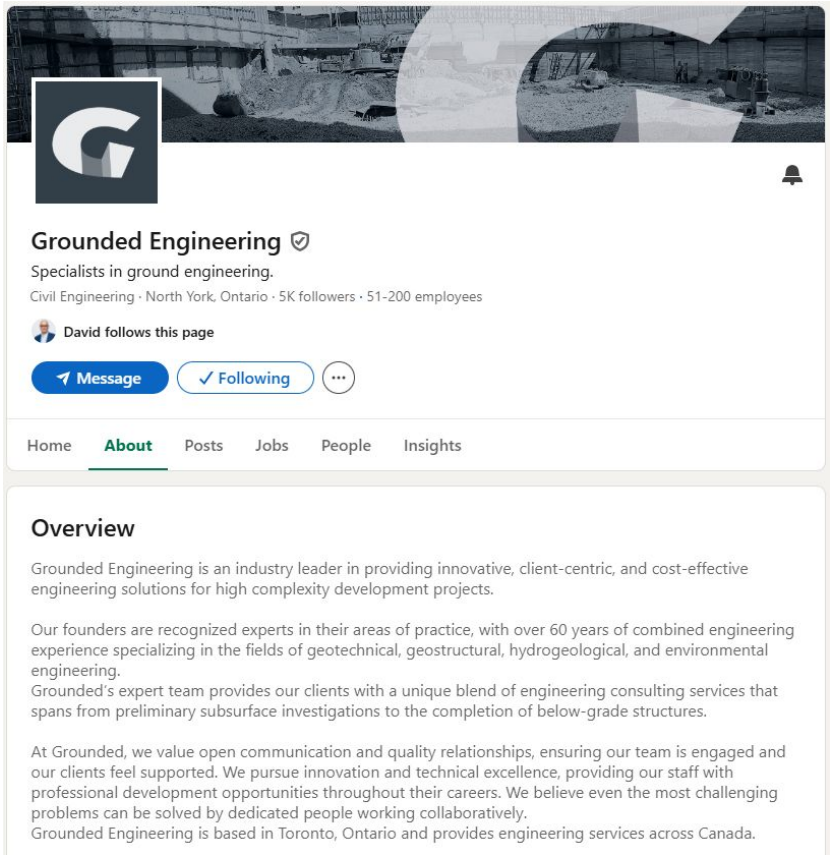

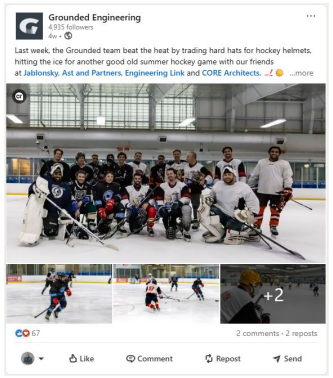

Insights:

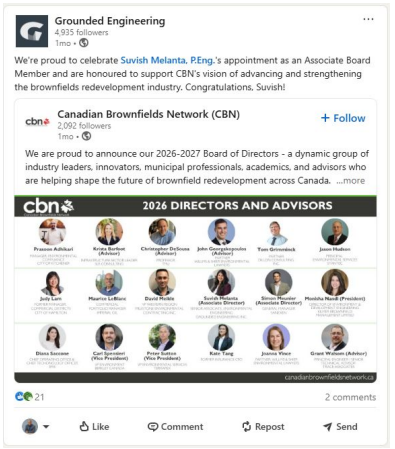

- ✔ GBP Photos (3 by owner)
- ✔ 18 Reviews – 4.6 avg (latest 2 yrs)
- ✔ Reviews – but no responses
- ✔ Backlinks/ search listings

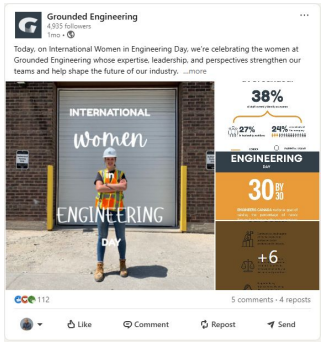

NEW INITIATIVES MARKETING

Competitors: Grounded Social

Insights:

- ✔ Strong culture focus
- ✔ Over 80 people
- ✔ Very internally focused
- ✔ Activity on LinkedIn & Instagram
- ✔ Infrequent posting; 4 weeks
- ✔ Focus: employee profile, events, and culture
- ✔ 4,935 followers, low engagement: 0.5-2% likes, 2-5 comments, and 0-4 shares

"At Grounded, we value open communication and quality relationships, ensuring our team is engaged and our clients feel supported. We pursue innovation and technical excellence, providing our staff with professional development opportunities throughout their careers. We believe even the most challenging problems can be solved by dedicated people working collaboratively."

NEW INITIATIVES MARKETING

Competitors: How Does PGCC Compare Digitally?

Firm	Domain Score ("Digital Presence")*	Quality Score ("Believability")**	LinkedIn Followers
PG Geotechnical Consultants	30	72	170
Isherwood Geostructural Engineers	55	80	2,791
Grounded Engineering	58	82	4,935
Dr. Sauer & Partners	72	85	7,462
Gall Zeidler Consultants	70	87	3,256

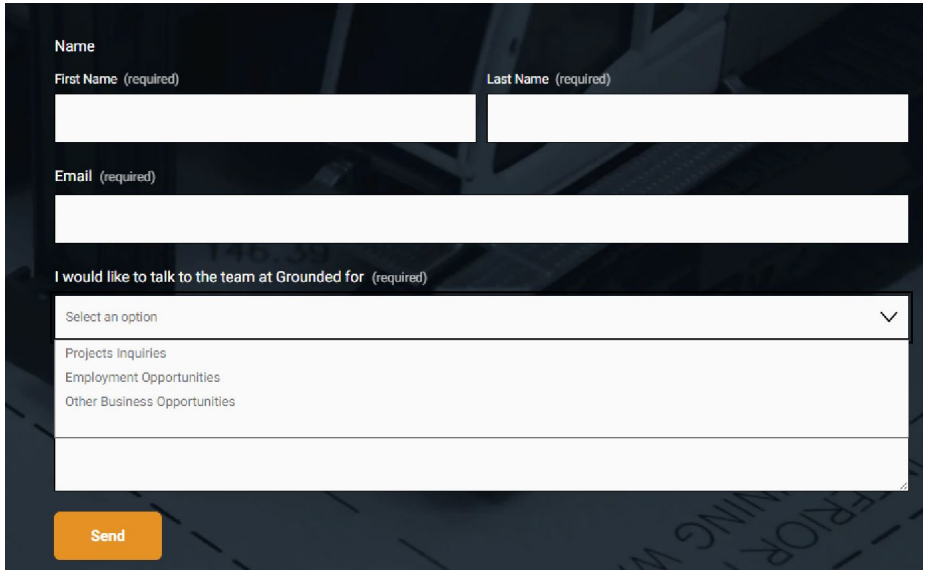

Insights:

- ✔ Competitors are clearly outperforming PGGC
- ✔ Secondary competitors are digitally compliant, clear, credible, and have social proof
- ✔ Primary competitors are not proficient or consistent in their digital activity
- ✔ Closing this gap will take time, but there is a clear pathway

* Domain Score proxy: brand visibility, indexed footprint, authority signals, social proof and source credibility
** Quality Score proxy: clarity, proof, navigation, conversion readiness, niche differentiation and content freshness

NEW INITIATIVES MARKETING

Competitors: Lead Capture/ Prospecting

Insights:

- ✔ Does not appear to be fully utilized in this segment
- ✔ Among key competitors, Ground uses a better Contact Form
- ✔ Every touch point is an opportunity to lead capture
- ✔ Valuable opportunity for PGGC

NEW INITIATIVES MARKETING

Marketplace Review

Ideal Clients and Industry Focus Areas

NEW INITIATIVES MARKETING

Current vs. Ideal Clients

Current Target Clients*:

- ✔ Medium-Sized Engineering Firms (lacking specific technical expertise)
- ✔ Building Companies/ Construction Consortiums
- ✔ Energy/ Hydroelectric Corporations (R&D)
- ✔ Municipalities/ Government
- ✔ Engineering Firms (requiring overflow support or experiencing conflict-of-interest)

Ideal Clients:

- ✔ Established engineering and infrastructure consulting firms that manage complex projects but periodically require deeper specialist expertise in geotechnical, underground, tunnelling, hydrogeological, structural, or technical-review work.

* Extrapolated from our Kickoff Call, Jul 3, 2026

NEW INITIATIVES MARKETING

Ideal Client Profile

Industry:

Engineering Consulting & Professional Services

- Transportation and transit infrastructure
- Tunnels and underground infrastructure
- Municipal and civil infrastructure
- Water and wastewater
- Buildings and major development
- Mining and natural resources
- Energy and utilities
- Major public infrastructure programs

Attributes:

- Working on projects where ground conditions, underground construction, foundations, excavation, soil-structure interaction, hydrogeology or complex geotechnical risk can materially affect project success.

Pain Points:

- Complexity
- Breadth without infinite depth
- Large or technically significant projects
- Variable workload
- Specialist gaps
- Risk exposure
- Collaborative delivery model
- Need for independent opinion
- Time pressure

NEW INITIATIVES MARKETING

Marketing Review

Key Insights & Recommendations

- ✔ Our high level insights on current marketing & your opportunities
- ✔ Questions and clarifications

NEW INITIATIVES MARKETING

Key Insights: *PGGC Product/ Service Highlights*

Angel Garcia-Fontanet PEng, PhD

- ✔ Critical thinker and unconventional problem solver
- ✔ Skilled Civil Engineer solving complex ground conditions, underground risk, structural, or geotechnical challenges
- ✔ Over 30 years of experience, including 15 years on Canadian projects
- ✔ Chartered Civil Engineer and member of the Institution of Civil Engineers (MICE) in the United Kingdom, Professional Engineer (PEng) in British Columbia, Ontario and Alberta (Canada) and member of Colegio de Ingenieros de Caminos (Spanish Institution of Civil Engineers).
- ✔ Member of the Canadian and Spanish Geotechnical Societies. Member of Tunnelling Association of Canada (TAC).
- ✔ Member of the following Technical Committees of the International Society for Soil Mechanics and Geotechnical Engineering (ISSMGE): TC203 (Earthquake Geotechnical Engineering), TC208 (Offshore Geotechnics) y TC216 (Frost Geotechnics).
- ✔ Vested in The successful completion of your critical projects

NEW INITIATIVES MARKETING

Marketing Strategy Direction

Our Thoughts & Summary

- ✔ Our high level insights and thoughts for strategy direction
- ✔ Questions and clarifications

NEW INITIATIVES MARKETING

Why a “Core Message”?

A clear, simple statement that tells people what your business does and why it matters. It focuses on solving a specific customer problem rather than just using a catchy slogan.

- **Definition**: A short, distinct declaration of your primary value and differentiation.
- **Function**: It strips your business down to the single most important idea so that customers can easily remember and repeat it.
- **Distinction**: Unlike a vague tagline, a core message immediately communicates utility and target audience alignment.

Why It Matters

- **Differentiate**: It separates you from competitors in a crowded marketplace by highlighting your unique approach.
- **Clarity**: It stops confusion by instantly telling prospects how you solve their pain points.
- **Alignment**: It acts as a filter for all future marketing content, ensuring your brand stays consistent across every platform.

Insights:

- ✔ Supporting statements provide details.
- ✔ Not everything needs to be said at once.
- ✔ You only need to capture your ideal client’s interest.

NEW INITIATIVES MARKETING

Where is a Core Message Used?

Your core message is used across **every single touchpoint** of your business. It serves as the foundation for your entire marketing strategy and is integrated into the following areas:

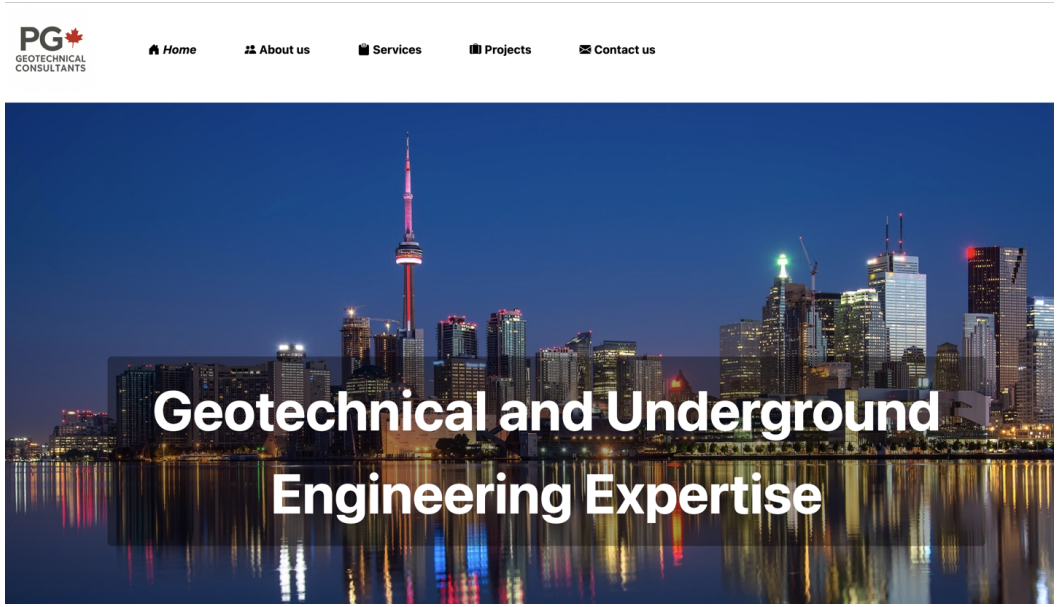

- **Website Homepage**: Placed above the fold as the main headline.
- **Social Profiles**: Used as the bio on LinkedIn, X, and Instagram.
- **Email Signatures**: Placed below your name as a permanent tagline.
- **Elevator Pitch**: Answered instantly when someone asks, "What do you do?"
- **Sales Presentations**: Presented on the opening slide to set the context.
- **Networking Events**: Shared during introductions to grab immediate interest.
- **Ad Campaigns**: Used as the primary hook in Google or social media ads.
- **Content Strategy**: Used to guide the topics of your blogs and videos.
- **Lead Magnets**: Formatted into the titles of your free eBooks or guides.
- **Team Onboarding**: So everyone describes the company identically.
- **Decision Making**: A filter to check if new products align with your core value.

Insights:

- ✔ These are sub points which strengthen the core message to high growth companies.
- ✔ Shows you understand their pain and how to get them the results they want.

PGGC’s Current “Core Message”

The homepage headline is "Geotechnical and Underground Engineering Expertise." The intro text reads as a company description: Toronto-based, three decades of experience, 15 years in Canada, lists technical capabilities. The six service cards are labeled by discipline (Structural Design, Geotechnical Design, etc.) with one-line descriptions.

There is no core message. The headline is a category label, not a positioning statement. The intro paragraph is about PGGC, not about the buyer or their problem. Nothing on the homepage answers "why this firm" or "who is this for." A mid-sized engineering firm landing on this site for the first time would see credentials but no reason to pick up the phone.

NEW INITIATIVES MARKETING

Our Proposed Core Message

Expert geotechnical designers for the problems your team can't solve alone.

When your project hits complex ground conditions, underground risk, or geotechnical challenges beyond your in-house expertise, we work as your sub-consultant, handling the unconventional technical scope so you can deliver the full project with confidence. PGGC brings 30+ years of specialist engineering experience and 15 years of Canadian project delivery.

- *This message directly addresses the buyer's situation (they have a problem they can't solve in-house or with their existing team), positions PGGC as a collaborator (not a threat), and leads with the proof points that matter most to this audience: depth of expertise and Canadian track record. It also preemptively answers the trust question Angel identified: "Why should I work with this firm?"*

Core Message - Website Introduction Replaced

Who We Are

PG Geotechnical Consultants (PGGC) are master geotechnical, structural, and underground engineering designers you call when a project's ground conditions are beyond your in-house capacity. For over 30 years—including 15 years of continuous delivery in the Canadian market—we have served as the trusted sub-consultant that tier-one engineering firms rely on to de-risk high-difficulty technical projects.

What We Do

We integrate advanced geotechnical, structural, and groundwater hydrology expertise to solve the complex underground challenges that put project timelines and budgets at risk.

- **Complex Foundations**: Designing deep foundations and retaining structures for highly constrained urban environments.
- **Underground & Tunnel Engineering**: Engineering shafts, cut-and-cover structures, and conventional or mechanized tunnelling in challenging soil and rock.
- **Geotechnical Risk Management**: Delivering robust designs for ground improvement, slope stability, and complex surface or groundwater management.

Why It Matters to Your Team

- You do not need to turn down complex bids or take on unmanageable underground liability. As specialized designers, we step in seamlessly as an engineering extension of your team. Our deep understanding of constructability means we know exactly how the entire project fits together. We handle the high-difficulty design scope so you can secure larger projects, mitigate real-world construction risks, and deliver to your clients with absolute confidence.

Marketing Strategy: How to Market?

Of all the marketing things PGGC could do, the most important tactics to choose will be the ones that provide the most coverage, establish trust and are an efficient foundation for PGGC to get known in Canada - Ontario specifically.

For this reason we recommend three tactics:

1. Online - company website, GBP and LinkedIn
2. In-person - trade shows, webinars, associations
3. Email - warm/cold outreach with dedicated nurturing process to capture the interested from the efforts of #1 and #2, and build longer-term relationships/ conversion

Insights:

- ✔ Website, GPB, LinkedIn 24/7
- ✔ Events where Angel is networking, presenting, meeting potential clients.(online or in person)
- ✔ Email outreach with lead nurturing in place to keep in touch and known beyond first conversation.

NEW INITIATIVES MARKETING

Marketing Strategy: Online - Website

Current Issue: Critical structural flaw - The service and project detail pages return empty content when fetched directly; invisible to search engines. The software engineer needs to rebuild these as server-rendered HTML.

The website is clean and professional but functions as a brochure. It describes services without speaking to a specific buyer's problem or guiding them toward a next step.

Recommended Fixes:

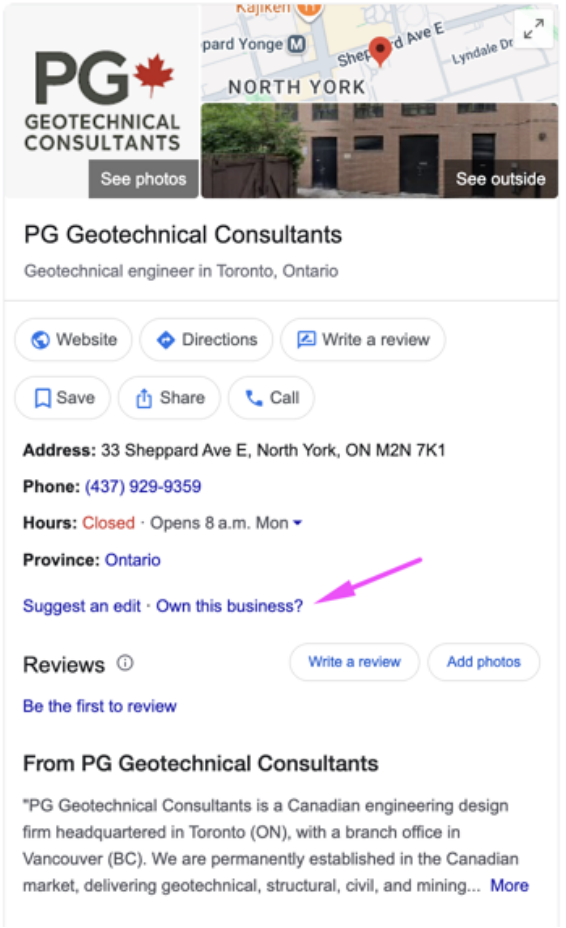

1. Make website visible to AI and search engines
2. Update the website written content based on the Core Message. Speak to your potential clients
3. Direct the website user through the journey of know, like, trust - rewrite content to facilitate this
4. Encourage downloads of technical reports/case studies
5. Ensure each page can stand on its own for information, organic visibility and aligns with search traffic
6. Ensure each page gives the user a next step towards becoming a client

Marketing Strategy: Online - GBP

Current Issue: Google Business Profile is not claimed. No Google reviews. No local search presence.

Recommended Fixes:

- Claim and fully build out a Google Business Profile for the Toronto office
- Populate the profile completely: business name, address, phone, website with UTM tracking, service descriptions, hours, and photos
- Begin collecting Google reviews -- start with past Canadian project contacts and ask for honest reviews of the working relationship
- Post updates to the GBP once every seven days (can repurpose blog or LinkedIn content as Google Posts)
- Add in-person photography of the Toronto office, team, and any site visits when Angel and Ima are in the city

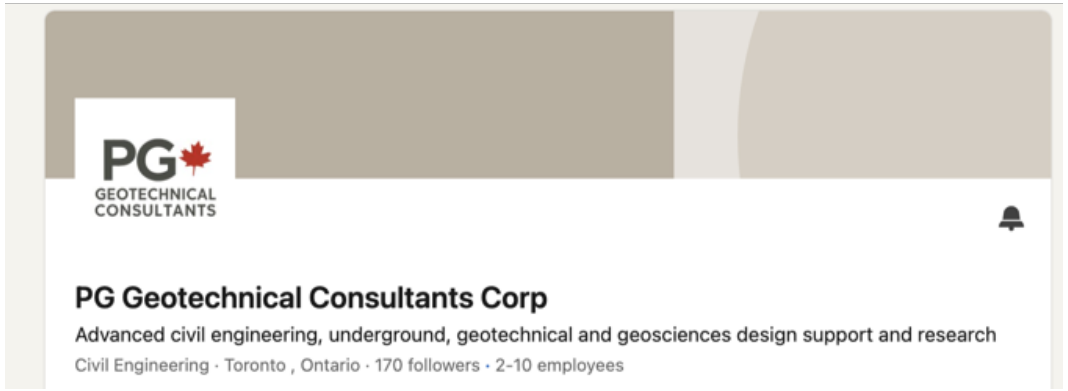

NEW INITIATIVES MARKETING

Marketing Strategy: Online - Social

Current Issue: LinkedIn company page exists but has minimal activity. No other social channels.

Recommended Fixes:

- Angel's personal LinkedIn is the highest-leverage channel. Engineering buyers in this space trust *people*. Angel should begin posting 1-2x per week: short technical insights, project lessons, observations from Canadian infrastructure work, and industry commentary.
- Company page: establish a regular posting cadence (1-2x per week) with project features, technical content, and industry updates
- Engage with ACEC Ontario, Canadian Geotechnical Society, and PEO content on LinkedIn to increase visibility within target networks
- Ensure a distinct definition remains between Angel's personal profile and PGGC company page and the content point of view
- Consider launching a LinkedIn newsletter once content cadence is established
- YouTube is a longer-term opportunity: project time lapse videos, site visits, or technical explainers would differentiate PGGC in a market where almost no one is doing video
- No need for Facebook, Instagram, or X -- this audience lives on LinkedIn

Marketing Strategy: In-Person

- Professional Engineers Ontario
- Good Roads and ORBA Convention 2027
- Canadian Urban Transit Association
- Canada’s Infrastructure Conference 2026
- Municipal Engineers Association Conference 2026
- TAC and underground infrastructure events
- Canadian Geotechnical Society, Southern Ontario Section
- ACEC-Ontario
- Various “one-off” events
- ETC.

Insights:

- ✔ Not all events require association membership
- ✔ In person takes effort but gets you farther along when relationship building.

- We will prioritize opportunities for you with suggested speaking points

NEW INITIATIVES MARKETING

Marketing Strategy

Implementation & Execution

- ✔ Our detailed plan
- ✔ Associations/events/networking - online and in person
- ✔ Business Development process
- ✔ Website/written content
- ✔ Social Media - LinkedIn/Google Business Profile

NEW INITIATIVES MARKETING

Digital Opportunity: Client Centric Design

- The digital gap is not a brand problem; it is a visibility and proof-packaging problem

- PGGC's specialist credibility is real, but not yet easy enough to find, understand, validate or share.
- Isherwood has stronger legacy proof and recognizable project authority; Grounded has stronger modern digital/social visibility.
- PGGC should own a narrower, more valuable position: senior specialist judgement when ground, groundwater, structures and underground construction interact.
- The next 12 months should focus on a repeatable proof system: crawlable service pages, case notes, principal-led insights, GBP hygiene and LinkedIn consistency.

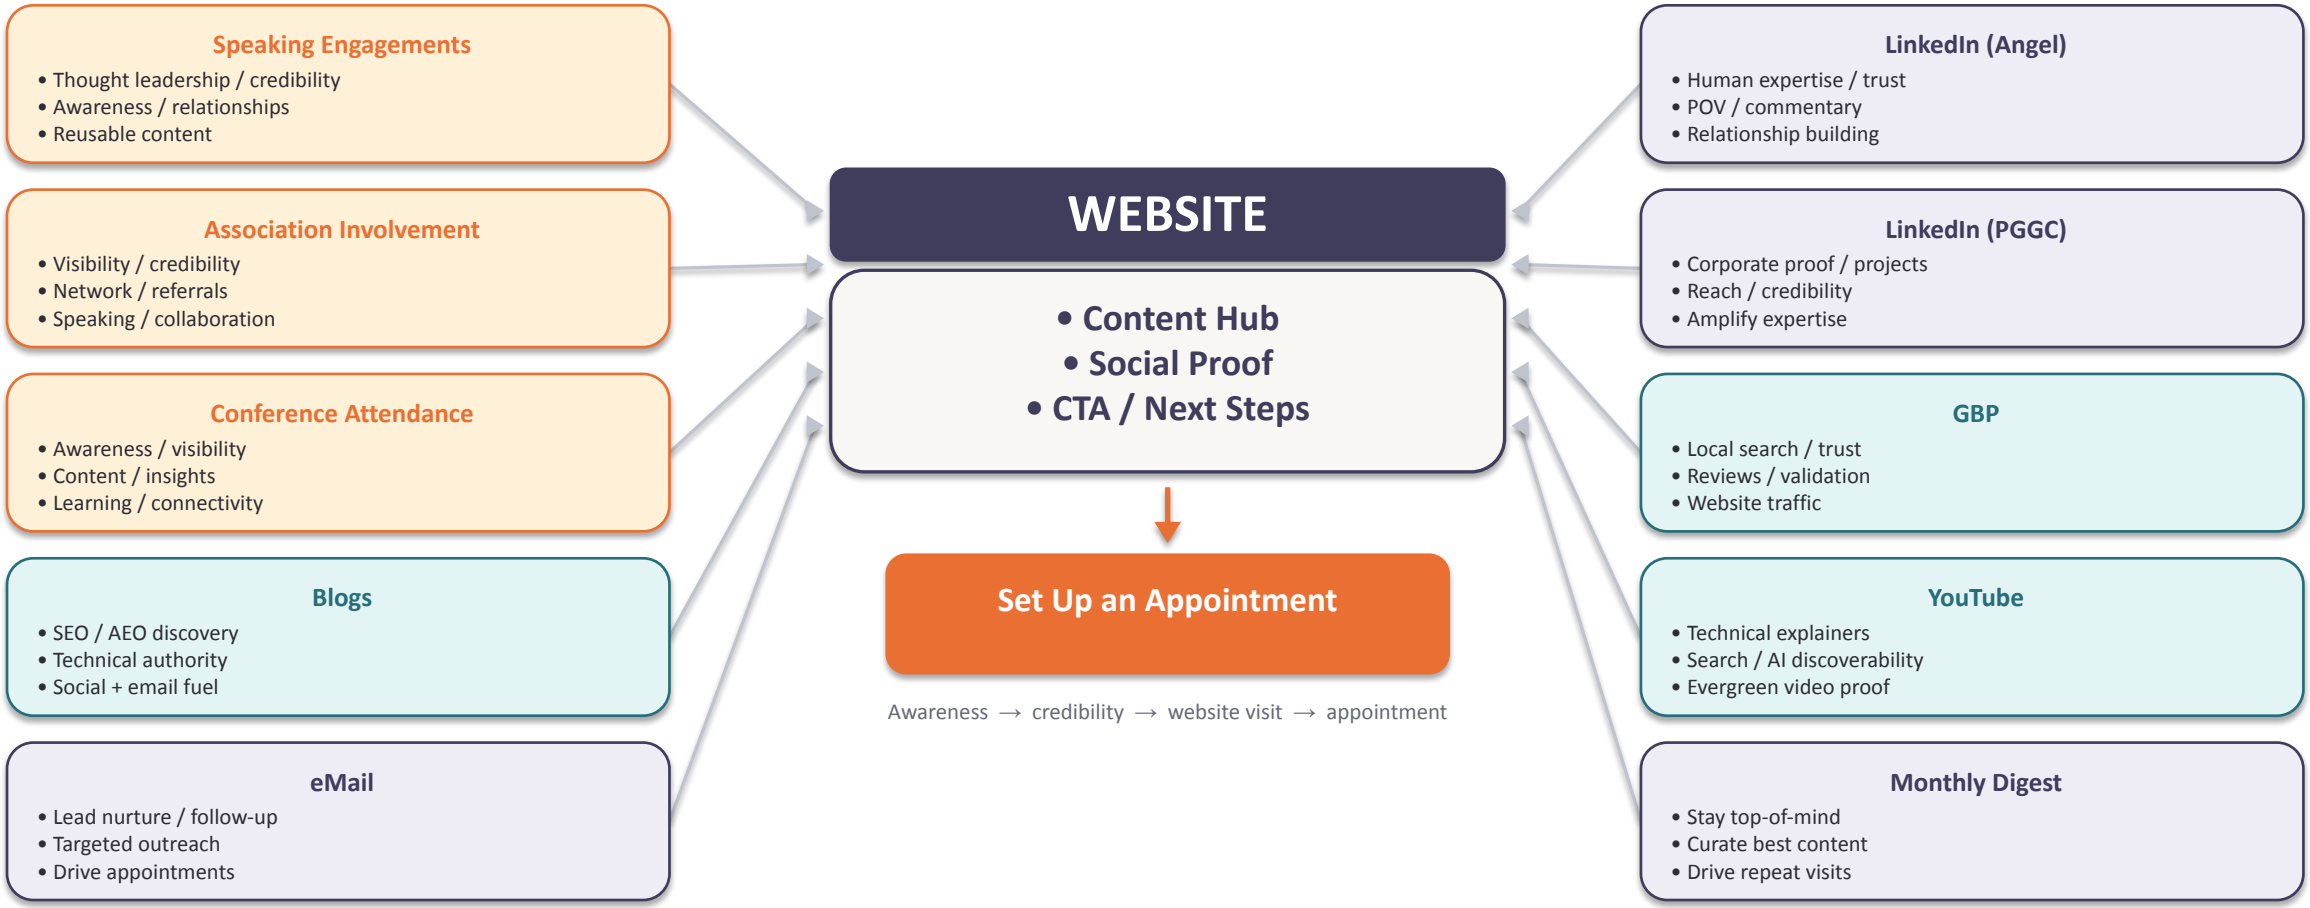

Insights:

- ✔ Lead with client's risk
- ✔ Projects as proof not decoration
- ✔ Angel - expert & thought leader
- ✔ Measure qualified conversations, not vanity reach.

NEW INITIATIVES MARKETING

All Roads Lead to the Website

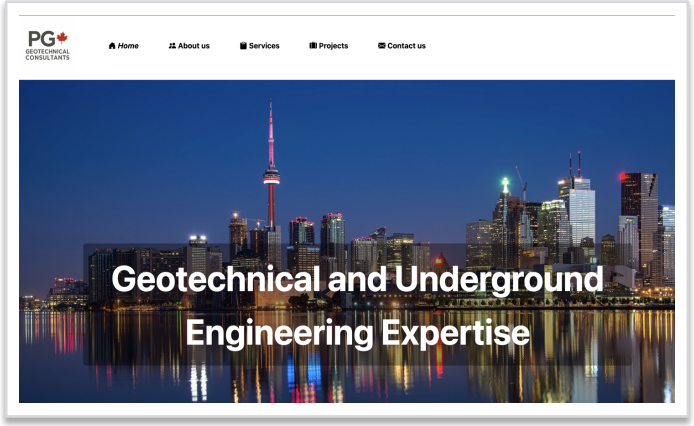

Every channel should build awareness, credibility or relationships and then move prospects to PGGC's website and a specialist conversation.

NEW INITIATIVES MARKETING

Site Map: Convert a Brochure Into a Specialist Buyer Journey

The site should help a prime consultant quickly decide: “Is PGGC the right specialist for this problem?”

Current structure

Home, About, Services, Projects and Contact are present, but the journey still reads mainly as a credential brochure.

Missing bridge

The buyer’s urgent situation is not sufficiently mapped: difficult ground, groundwater uncertainty, underground risk, peer review, construction-stage judgment.

Recommended structure

Build pages around capabilities, problems, proof and next steps: each page should stand alone for search, AI answers and referral sharing.

Site map priorities

✓ Rewrite the home page around the buyer problem

✓ Make each service page a credible landing page

✓ Turn project listings into case notes

✓ Add clear “when to call PGGC” prompts

Technical Summary Review: Fix Search Readability Before Scaling Content

Technical credibility must be matched by crawlability, clarity and measurement hygiene

Area	Observed issue	Action
Crawlable page depth	Service and project detail pages were previously observed as thin or empty when fetched directly.	Rebuild key pages as server-rendered/indexable HTML with unique body copy and metadata.
Copy precision	Some service descriptions are repeated or generic; minor spelling errors undermine expert perception.	Proofread; remove duplicate descriptions; make service language technically precise but buyer-readable.
Broken/weak pathways	Projects and services do not fully guide users to related proof, contact steps or downloadable assets.	Add internal links, breadcrumbs, related case notes and one CTA per page.
Backlink proof	Search results show competitor mentions from industry bodies and publications.	Earn links through conference summaries, association posts, technical papers and partner/project mentions.
Measurement	Public audit cannot verify real traffic, queries, conversions or engagement quality.	Request GA4, Search Console, LinkedIn admin and GBP access; create a monthly scorecard.

Priority

✓ Technical SEO is a credibility issue for specialist B2B

✓ Do not invest in promotion until priority pages are indexable

✓ Backlinks should come from expertise proof, not directories

NEW INITIATIVES MARKETING

Site Mapping Review: Current Structure Undersells the Specialist Decision Path

The website has credible language but should guide a prime consultant from problem to proof to contact

Home

Broad expertise intro, service cards and project highlights

About

Experience, philosophy, practice memberships, vision

Services

Six cards; several detail URLs show little or no crawlable explanatory content

Projects

Strong names, but case proof is not consistently packaged for search or decision support

Contact

Basic contact path; limited problem-led conversion framing

Recommended decision-path site map

Who We Help

Prime consultants, design-build teams, public agencies, contractors

When to Call PGGC

Uncertainty, groundwater risk, tunnel/underground interfaces, peer review, construction support

Capabilities

Geotechnical, hydrogeological, underground, GSI/soil-structure, peer review, applied R&D

Proof Library

Case notes by problem, project type, challenge, intervention and decision outcome

Technical Insights

AEO-ready explainers, FAQs, conference notes and principal POV

Engage PGGC

Clear first-call CTA, scope examples, confidentiality and subconsultant positioning

Key recommendation

Restructure around buyer risk moments and searchable proof. Service pages should become landing pages, project pages should become short case notes, and the home page should immediately clarify PGGC as a senior specialist subconsultant for complex non-routine challenges.

NEW INITIATIVES MARKETING

SEO + AEO Summary: Win High-Intent Specialist Searches

The goal is to become the answer for complex, non-routine engineering questions

Complex geotechnical peer review

Independent technical review; due diligence; second-opinion design support.

Groundwater and excavation risk

Groundwater behaviour, pumping tests, inflow, construction impacts.

Tunnel and underground design

Shafts, cut-and-cover, conventional/mechanized tunnelling, settlement risk.

Soil-structure interaction

FEM/numerical modelling, monitoring interpretation, structural response.

Ground improvement and grouting

When advanced treatment is justified and how to de-risk implementation.

Applied R&D / Thermaltunnel

Differentiated innovation around thermal loads, resilience and underground performance.

Content principle

AEO-friendly content should begin with a concise answer, then provide judgement factors, proof, limitations and a “when to call PGGC” CTA.

SEO/AEO rule

✓ Answer real technical questions clearly

✓ Use FAQ and Article schema where useful

✓ Write for expert buyers and AI summaries at the same time

✓ Add “judgement criteria,” not just definitions

NEW INITIATIVES MARKETING

Content Strategy: Five Pillars That Reinforce the Positioning

Every post should make PGGC more findable, more credible or more referable

Technical judgement

Short expert observations from Angel: what matters, what is often missed, how to think about risk.

Complex problem proof

Case notes from projects or anonymized situations that show constraint, judgement and outcome.

Searchable explainers

Service-page and FAQ content for high-intent questions in geotechnical, groundwater and underground work.

R&D / innovation

Thermaltunnel, geothermal, energy-storage and applied research updates that show unusual depth.

Industry relationships

ACEC-Ontario, CGS, TAC, PEO, conference and partner engagement to build referral credibility.

Content discipline

✓ Do not chase generic “thought leadership”

✓ Translate depth into buyer confidence

✓ Create once, repurpose deliberately

✓ Keep confidentiality protected through anonymized lessons

Priority format Use “Problem → What matters → PGGC judgement → Practical implication → Link/CTA” as the recurring structure for posts and articles.

NEW INITIATIVES MARKETING

12-Month Social Calendar: Editorial Themes by Quarter

Designed to support specialist positioning, SEO/AEO assets and referral credibility

Q1: Foundation + proof

Jan: Positioning launch

Feb: Peer review + risk

Mar: Case note sprint

Subject ideas

Rewrite service pages; publish two "when to call PGGC" posts; launch first case note.

Channels: Website + LinkedIn + GBP

Q2: Complex ground + groundwater

Apr: Groundwater behaviour

May: Excavation risk

Jun: Monitoring interpretation

Subject ideas

Hydrogeology explainer; groundwater FAQ; settlement monitoring case post.

Channels: Website + LinkedIn + GBP

Q3: Underground infrastructure

Jul: Tunnel interfaces

Aug: Soil-structure interaction

Sep: Construction-stage support

Subject ideas

Underground design carousel; numerical modelling POV; conference/association tie-ins.

Channels: Website + LinkedIn + GBP

Q4: Innovation + confidence

Oct: R&D / Thermaltunnel

Nov: Lessons learned

Dec: Year-end confidence brief

Subject ideas

Applied research update; senior judgement principles; downloadable annual technical briefing.

Channels: Website + LinkedIn + GBP

Recommended cadence

✓ LinkedIn company: 1x/week

✓ Angel profile: 1x/week to start, 2x/week after rhythm stabilizes

✓ GBP: 1x/week, repurposed from LinkedIn/case notes

✓ Email nurture: monthly digest to warm contacts

Weekly baseline: Company LinkedIn 2× • Angel 1× • GBP 1× • Website monthly

Tie these themes to public speaking and industry events.

Prepared for strategic discussion. Validate platform metrics in GA4, Search Console, LinkedIn Admin and Google Business Profile before publishing external claims.

NEW INITIATIVES MARKETING

Proof Architecture: Reusable Marketing Assets

One engineering project can become a case note, LinkedIn post, GBP update, insight article and sales proof point

Project / technical issue

Raw experience, internal notes, drawings, conference material

→

Case note

Context, constraint, PGGC judgement, result, risk reduced

→

Insight post

What the market can learn without disclosing confidential details

→

Principal POV

Angel explains the judgement behind the decision

→

Lead asset

PDF brief, referral email, proposal proof, GBP update

Recommended recurring content pillars

Specialist case notes

Make project confidence searchable.

Technical judgement explainers

Show how PGGC thinks.

Risk alerts / lessons learned

Earn shares from technical peers.

R&D and conference briefs

Signal advanced expertise.

Principal commentary

Build human trust around Angel.

Corporate LinkedIn vs. Angel LinkedIn: Distinct Roles, Shared System

Both LinkedIn profiles help the business. Angel's profile provide authority and visibility for the leader of the company. The company profile provides proof and is the content bucket that any team members can share on their LinkedIn profile as you build out your Canadian team and provide opportunities for your engineers to raise their profile and help promote the company.

AGF Profile Page

Purpose: build personal authority.

Post first when the content has judgement, interpretation or personal experience. Use concise lessons, technical POV and comments on infrastructure issues.

PGGC Company Page

Purpose: create institutional proof.

Post case notes, service explainers, announcements, conference recaps and links to website assets.

Operating Model

Angel posts first for POV and judgement. PGGC posts first for formal news/case assets, then shares Angel's commentary as institutional proof.

NEW INITIATIVES MARKETING

Channel Plan: Match Message, Channel and CTA

Each channel should have a clear job in the business-development system

Channel	Job	Content	CTA	Timing
Angel LinkedIn	Authority + trust	Technical POV, lessons learned, comments on infrastructure issues	Comment, connect, DM for discussion	Tue or Wed, 8:00–9:00 AM
PGGC LinkedIn	Institutional proof	Case notes, service explainers, event recaps, project/R&D updates	Read case note, visit service page, contact PGGC	Thu, 8:00–10:00 AM
Google Business Profile	Local trust + search presence	Weekly update, photo, case/insight snippet, review response	Call, website visit, directions/contact	Wed, 10:00 AM
Website insights	Search/AEO asset	FAQ pages, case notes, capability landing pages, downloadable briefs	Download/contact/meeting request	2 new assets/month
Email nurture	Relationship memory	Monthly technical digest and event follow-up sequence	Reply, book call, forward internally	Monthly Tue morning

Execution details

✓ Use UTM links from LinkedIn and GBP

✓ Create a simple editorial owner/review workflow

✓ Respond to comments and reviews within 48 hours

✓ Track qualified conversations back to content source

NEW INITIATIVES MARKETING

Weekly Publishing: Practical Cadence, Clear Ownership, Specific CTAs

Start consistent; use performance data to refine times after 8–12 weeks

When	Channel	Format	Purpose	CTA
Tuesday 10:00 ET	PGGC LinkedIn	Case note / proof post	Show problem, constraint and specialist judgement.	Read the related case note
Wednesday 8:30 ET	Angel LinkedIn	Principal POV	Interpret a technical decision, lesson learned or risk pattern.	Discuss a similar question
Thursday 3:30 ET	PGGC LinkedIn	Technical explainer / carousel	Answer a specific “how/when/why” technical question.	Visit capability page
Friday 10:00 ET	Google Business Profile	Project/service update	Keep local profile active; reinforce services and geography.	Call / website / service link
Monthly first Tuesday	Website	Insight or case note	Add one durable searchable asset to the proof system.	Contact PGGC
Quarterly	Email/PDF/LinkedIn document	Specialist briefing	Package the strongest insights into a referral-friendly asset.	Forward to project team

Content governance: One quarterly planning session should approve themes, priority assets, confidentiality rules and which posts are company-first versus Angel-first.

NEW INITIATIVES MARKETING

Measurement: Track Confidence Signals, Not Just Activity

The funnel is referral-heavy, so measurement must connect content to conversations

Visibility

Search impressions, non-branded query growth, GBP views, LinkedIn reach among target firms

Trust

Reviews acquired, case note views, time on service pages, returning visitors, profile views

Engagement

Comments from engineers/owners/contractors, saves/shares, replies, newsletter clicks

Conversion

Qualified contact forms, meeting requests, warm replies, RFP invitations, referrals

Business learning

Source of lead, win/loss, sales-cycle length, best-performing themes and events

Data required

- ✓ Request GA4 and Search Console
- ✓ Use LinkedIn admin analytics
- ✓ Add UTM links to GBP and posts
- ✓ Review monthly; optimize quarterly

Core dashboard question

Which digital signals are creating qualified introductions with multidisciplinary engineering firms facing complex technical issues? This will be the same for your events, not all channels will be worth equal effort, but you have to experiment to know what works best for your business.

NEW INITIATIVES MARKETING

Associations & Events

Build Repeated Visibility Where Buyers Are

- Focus on the ecosystems where PGGC's likely buyers already gather.
- Prioritize repeated presence over one-off attendance. Relationship building takes time, repetition and multiple touchpoints.
- Core relationship ecosystems: **ACEC-Ontario / ACEC-Canada, Tunnelling Association of Canada, Canadian Geotechnical Society, DFI and CUIIC.**
- Priority conferences: **Canada's Infrastructure Conference, MEA, No-Dig North 2027 and Good Roads 2027.**
- Use broader associations selectively.
- Attend relevant **virtual webinars, technical sessions and association events** to stay visible without needing to be physically present everywhere.
- For priority events, identify target contacts in advance, connect on LinkedIn, meet in person where possible, and follow up promptly afterward.
- Use **email follow-up and lead nurturing** to continue the relationship after the event, rather than relying on the initial conversation.
- Use **Angel's and the PGGC page's LinkedIn activity** to reinforce visibility between events so contacts continue seeing PGGC's expertise and point of view.
- Track lead source and resulting opportunities so PGGC can determine which associations and events produce the strongest commercial return.

Insights:

- ✔ Make Angel and PGGC a familiar specialist among the people most likely to need complex underground and geotechnical expertise.
- ✔ See Excel spreadsheet

NEW INITIATIVES MARKETING

Associations & Events: before/during/after

- PRE SHOW
  a. 6 weeks before the event, send out your first email/LinkedIn direct message letting them know you will be at “X” show/event and would like to meet up with them (if they are going, assume they are and this may give them a way to respond to you - “no I am not going but let’s meet in ABC month”.
  b. between now and the next email, collect and answer any responses
  c. 2 weeks before the event, send out the second note about your attending the event
- AT THE SHOW
  a. At the event: the more these are attended, the easier they will be, as well, the more people get to know you, the more familiar faces you will be b - refer to the ‘at the event’ strategy
- POST SHOW
  a. After the event, two types of emails to go out - one to thank the people you met at the event for meeting with you and you now follow up in the established cadence: connect on LinkedIn and depending on the conversation at the even follow up with them in 8-12 week.
  b. The second type of email is at your discretion, depending on how you are feeling about the relationship, would be to all the people you emailed pre-show to give them a recap of the show and suggest a call/meeting

Insights:

- ✔ Event strategy keeps you focused on the purpose of attending the event.
- ✔ See Excel spreadsheet for recommended events, location and dates.

NEW INITIATIVES MARKETING

Associations & Events: during

Objective: Meet relevant people, learn enough to determine whether there is a reason to know each other, and earn the right to continue the conversation later.

- For PGGC, awareness is the problem. Angel needs repetition. People need to meet you, understand what PGGC does, see you again, receive something useful from you later, and gradually remember PGGC when the right project arises.

- Networking events (5pm - 7pm)
  a. 4+ quality conversations and business cards/LinkedIn connections
- Full conference (single or multi-day)
  a. 8+ quality conversations and business cards/LinkedIn connections

- Refer to the Word document for talking points for each type of event and 10 conversation scripts for various scenarios.

Insights:

- ✔ You don't need to meet everyone.
- ✔ See attached Word doc for scripts for 10+ in person networking conversations.

NEW INITIATIVES MARKETING

Business Development

Current Situation: Excellent start with the ACEC-Ontario member list outreach.

- Discipline the process of lead generation (outreach by email to people who could be clients) and lead nurturing (keeping in touch with people even though they are not ready to buy today).
- This process fills the pipeline by turning contacts from associations, events and prospecting into ongoing conversations that can develop into meetings, opportunities and sales.
- It connects marketing activity to business outcomes by showing how organized contacts and email follow-up lead to replies, meetings, sales opportunities and, ultimately, revenue.
- By recording where each lead came from, when they entered the process, when they became an opportunity, whether they won or lost, and how long the decision took, the company can identify which sources produce the most effective leads while calculating its documented win rate and sales cycle.
- Gather and organize contacts
- Send the first email while the interaction is still recent (within 24hrs)
- Create a simple follow-up sequence to establish lead nurturing
- Know how to deal with unsubscribes per the CASL laws in Canada
- Measure and improve the process
- Consider a CRM only after the process has run for 3 months and you have a good idea of how the CRM could help this process and your business

Insights:

- ✔ You have seen how effective email is for business development
- ✔ Tracking where your best leads come from will help you make future decisions on which shows or events bring the best business results

NEW INITIATIVES MARKETING

Business Development: Daily Actions

- Aim each week for:
  - **5 new contacts**
  - **5 warm-up actions**
  - **5 follow-ups with existing contacts**
- Find new contacts through:
  - ACEC, TAC, CGS, DFI, CUIIC and NASTT
  - LinkedIn
  - Event speaker/sponsor lists
  - Infrastructure project announcements
  - Existing contacts and introductions
- A warm-up can include:
  - Following someone on LinkedIn
  - Sending a personalized connection request
  - Commenting thoughtfully on a relevant post
  - Congratulating someone on a project or new job
  - Attending a webinar they are part of
  - Sending a short note after hearing them speak
- Focus on **relevant people inside target firms**, not simply collecting company names.
- Track who was contacted, when, why they are relevant and what the next step is.
- Keep event-related outreach **on top of the normal weekly rhythm**, using speakers, sponsors and attendees as additional prospects.
- Do not feel pressure to ask for a meeting immediately.
  The goal is to steadily move people from **awareness → familiarity → conversation → opportunity**.

Insights:

- ✔ Advance 3 relevant business relationships every day
- ✔ 15 per week 30 mins/day
- ✔ See spreadsheet: lead generation and nurture tracker

NEW INITIATIVES MARKETING

Content: How it Works Together

See Spreadsheet for plan

- This plan reduces operational chaos. PGGC does not need separate ideas for the website, LinkedIn, Angel's profile and GBP every week. Two strong blogs per month become the anchor, and the rest of the publishing system is derived from them.

- That gives PGGC:
  - consistent weekly visibility
  - clearer message repetition
  - stronger search footprint
  - regular proof of activity
  - repeated exposure to Angel's point of view
  - recurring reminders of PGGC's services
  - a content system that is sustainable

Insights:

✔ Publishing consistency alone will not solve the awareness problem. It needs to stay connected to the relationship-building and BD system you have already built: events, association participation, LinkedIn connections, email follow-up and nurture.

Questions?

NEW INITIATIVES MARKETING

Next Steps

1. Take time to review the strategy
2. Review the supporting documents and actions
3. Decide how to execute: NIM, NIM + PGGC, PGGC only

Appendix

- Please note that the detailed recommendations and plans are included on accompanying Word docs and Excel spreadsheets.

Client Insights - Positive: Josep

- ✔ PGGC is brought in for complex or unusual geotechnical problems where a routine solution is not sufficient.
- ✔ Angel is highly accessible and remains directly involved in the work.
- ✔ Clients know who is responsible for the work and can reach PGGC quickly when a problem arises.
- ✔ PGGC is viewed as reliable, technically strong and committed to delivering a sound solution.
- ✔ Josep considered PGGC's quality and dependability valuable enough to justify paying a moderate premium over lower-cost alternatives.
- ✔ He would recommend PGGC to others, particularly for specialized foundations, difficult ground conditions, seismic issues and advanced modelling requirements

Client Insights - Positive: Manuel

- ✔ He described Angel as committed, experienced and sophisticated in his technical approach.
- ✔ Angel remained closely involved and did not want important aspects of the design overlooked.
- ✔ PGGC demonstrated a higher technical standard and stronger follow-through than Manuel had experienced with comparable consultants in other countries.
- ✔ PGGC contributed meaningfully to the project rather than simply delivering an isolated technical report.

Client Insights - Positive: Imma

- ✔ PGGC's strongest capability is its ability to move from investigation to implementation.
- ✔ PGGC combines academic and research-based knowledge with real-world engineering.
- ✔ The firm is highly specialized
- ✔ PGGC is capable of addressing technically difficult problems that require more than a standard engineering response.

Client Insights - Positive: Andreu

- ✔ He regarded Angel as technically strong and capable of developing sophisticated solutions.
- ✔ Angel communicates well with clients and staff.
- ✔ PGGC has a high level of technical knowledge and experience in complex engineering situations.
- ✔ The company’s depth of expertise is a meaningful asset

Client Insights - Positive: Claudia

- ✔ She described Angel as methodical, organized, punctual and reliable.
- ✔ He is genuinely engaged in understanding the reasoning behind technical recommendations.
- ✔ He takes a proactive approach to project and contract risk.
- ✔ She viewed his technical expertise as strong and credible.
- ✔ She considered PGGC's experience in civil infrastructure particularly relevant to the Canadian market

Client Insights - Positive: Sierra

- ✔ She regarded PGGC's technical expertise as strong.
- ✔ She viewed Angel as proactive, thoughtful and attentive to risk.
- ✔ She believed the company has valuable capabilities that are not yet sufficiently visible in Canada.

Client Insights - Positive: Claudia (employee)

- ✔ She described PGGC as a technically demanding but flexible workplace.
- ✔ Flexibility had improved significantly over time, including remote work and adaptable working hours.
- ✔ Her comments suggest that the company has developed a more responsive and accommodating internal working environment.

Client Insights - Constructive: Andreu

- ✔ PGGC may sometimes develop technically strong solutions that are more complex than necessary, particularly for smaller or lower-risk problems. In those situations, a simpler solution may be more practical and proportionate.
- ✔ Angel communicates well technically but may be less natural at building rapport, resonating with people or “selling” the value of the service.

Client Insights - Constructive: Josep Maria

- ✔ PGGC's technical reports can be difficult to interpret, particularly for readers who need to understand the model, calculations or proposed solution without reviewing the entire report.
- ✔ Annexes could be more complete and informative.
- ✔ Reports would benefit from additional drawings, figures and dimensioned explanations.

Client Insights - Constructive: Claudia

- ✔ Angel can be overly theoretical in early client discussions.
- ✔ Prospective clients may need a faster, more dynamic initial response that outlines possible options and a path forward before the detailed engineering work is complete.
- ✔ Some routine communications, including meeting-confirmation emails, were viewed as too long and bureaucratic.
- ✔ Her recommendation was that PGGC focus initially on Canadian civil infrastructure, where Angel has strong experience, rather than positioning itself immediately in mining or nuclear work.

Client Insights - Constructive: Manuel

- ✔ He would have preferred more in-person interaction during the project.
- ✔ The online working relationship was effective and he did not identify a material delivery problem, so this was a relationship preference rather than a significant service criticism.

Client Insights - Constructive: Claudia (employee)

- ✔ She suggested that employee activities or team-building could be considered, although she did not present this as a serious organizational problem.

Client Insights - Constructive: Sierra

- ✔ She did not identify a technical or delivery weakness.
- ✔ Her concern was that PGGC's expertise is not sufficiently visible in the Canadian market. Strong technical capability does not automatically create recognition or demand.
